

GS Pro V2.0 FAQ

No.	Q	A
1	How can I view the flightlogs that other people created using my drone?	Flightlogs are created based on the drone used on the mission and stored within Team records. You can view the flightlogs created by a particular drone if you are on the same team as the drone.
2	How can other people view the flightlogs that I create with someone else's drone?	Flightlogs are created based on the drone used on the mission and stored within Team records. Other people can view the flightlogs created by the drone you used during flight if they are on the same team as the drone.
3	How do I access my Team account data after the software license expires?	The data will be kept for 3 months after the license expires. However, if your Team account license remains expired for more than 3 months, DJI reserves the right to erase the data in your Team account without prior notice.
4	Can I delete my Team?	Please contact support@dji.com to delete Teams. All of the associated data will be erased after deletion.
5	Does GS Pro support Waypoint missions with more than 99 points?	Yes. However, when a flight mission has more than 99 waypoints, GS Pro will automatically section the waypoints into groups, each containing a maximum of 99 waypoints. When each group of waypoint actions are completed, the mission will pause by default. You can continue the mission by using the "Resume from Last Stopped Point" function.
6	What is the difference between Personal Workspace and Team Workspace?	GS Pro supports two work modes: Personal Workspace for individual drone pilots, and Team Workspace that supports multi-member collaboration and sharing. The two modes can be used at the same time. Please refer to the user manual for more information.
7	Can I use GS Pro offline?	Yes. It is recommended to use the "Sync All Data" function to download the data onto the App first before executing offline missions. The App does not automatically download data in the background. The App only stores the data that was last synced.
8	Will the data and purchased functions from the previous version of GS Pro be migrated to the new version automatically?	Yes. Your data and purchased functions will be migrated to the new version when you download the new version for the first time. The data from the previous version will be stored in the Personal Workspace associated with your DJI Account.
9	Is GS Pro free?	GS Pro is free to download and users can immediately access features including Virtual Fence, 3D Map Area, and Waypoint Route. There are also additional paid features that are available through in-app purchase. Please refer to the user manual for more information.
10	Under what account will the paid features be available?	The paid features will be available under your DJI Account after purchase. You can access these features from any iPad with your DJI Account information.
